Total Points and Total Points/60 Overview

For a full explanation of Total Points [go here](#)

Total Points takes nearly everything that SIS measures about a play and uses it to evaluate each player on a scale that allows you to compare them more easily.

It's always useful to be able to understand the different ways in which players can be valuable. Does he break a lot of tackles? Does he get a lot of yards after the catch? Does he make the best out of a poor offensive line? Total Points offers the opportunity to take all of those elements and get a quick picture of how well a player is performing overall.

What does the number mean?

All of Total Points uses the Expected Points Added (EPA) framework. EPA works by taking any situation and finding the odds that each different scoring possibility comes next. For example, if the next scoring play is a field goal by the current defensive team two drives from now, that counts as a -3. Average those values across all instances of the same situation and you get its Expected Points. Take the change in Expected Points on any play and you get its EPA.

Roughly, you can think of a 0 EPA play as one that "stays on schedule", an EPA of 1 or more as a big play for the offense, and an EPA of negative-1 or less as a big play for the defense.

Total Points starts by evaluating each player on that scale, where 0 is average. That's what we call Points Above Average. Then to both reward players who play full seasons and keep the sum of Total Points around what we'd expect a team to score or allow, we scale the results to the league scoring average (around 22 points per game).

So when you see Patrick Mahomes' 168 leading quarterbacks in 2018, you could take that as a rough estimate that he contributed just about 10 points per game to the Chiefs' offense on his own. Aaron Donald's 53 Points Saved in 2018 suggests that he was responsible for reducing his opponents' scoring by 53 points over the season.

Total Points / 60 Plays

Total Points can be broken down as a per-play rate metric. We like to then adjust that number to be on a per 60 play basis, as this gives a better approximation of a player's value over the course of a single game.

Positional Rankings Minimums for Total Points / 60 Plays:

QB/C/P/K: Top 40 players by snap count

RB/G/T/DE/DT/S: Top 80 players by snap count

WR/LB/CB: Top 120 players by snap count

4th Down Decision-Making Rankings

For our 4th down decision rankings, each coach's fourth-down decisions from the last two calendar years are ranked first by Expected Win Probability Added (xWPA) per fourth-down decision and then by the percentage of the time their decisions have matched SIS's recommendation. Any new coaches are not ranked.

The xWPA is based on estimating the win probability if a team were to take each fork in the road on 4th down (punt, kick, go for it) and comparing what was chosen to what might have been optimal.

We're evaluating the decision based just on the choice made and not on what happened afterward. You wouldn't regret punting from your own 20 on fourth-and-10 just because the punt was blocked, after all.
